

# Guardian by Seeing Machines Managing Risks Together

**AutoSense**  
DRIVING SAFETY

**FMG**  
Advice & Insurance

As an advice-led insurer, we're committed to helping farmers, growers, and provincial businesses avoid disruption and minimise losses – reducing stress, lost production, and downtime.

Managing vehicles on the road is risky business. Incidents can impact your ability to generate an income and put your drivers, and other people on the road, at risk. But we believe the risk can be minimised and managed, therefore reducing the likelihood of damage to your vehicles, and most importantly improving driver safety.

## What is Guardian?

Guardian is an intelligent driver safety solution that uses in-cab sensors to monitor the drivers' levels of fatigue and distraction in real-time.

When a fatigue or distraction event is detected, the driver is alerted by an in-cab audio alarm and/or seat vibration. Data and footage are immediately relayed to 24/7 Guardian Centre, which then alerts fleet management and allows them to respond in real-time to the developing situation in the cab. The system also features a forward-facing camera which captures critical information about road conditions at the time of the event.

## Benefits of Guardian

- Real-time driver safety intervention
- 24/7 access to Guardian Centre
- Real-time in-cab alerts

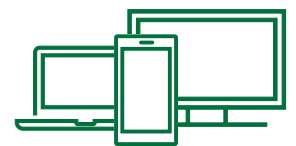

Guardian detects event in-cab & alerts the driver

Seeing Machines database

Event is classified at 24/7 Guardian Centre
